How to draw a rocket

Name _____ Date _____

I can draw a rocket, one step at a time.

1 Follow the steps

The dark lines are new in each step.

1

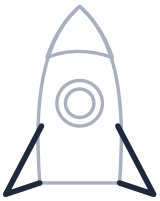

Draw a tall rounded shape for the rocket, pointy at the top.

2

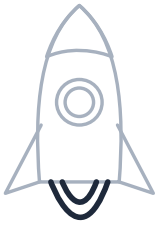

Draw a curved line near the top, and a round window.

3

Add a fin on each side at the bottom.

4

Draw fire coming out of the bottom.

5

Draw some stars around it. Then color your rocket.

6

All done! Now color your drawing.

Did you know?
A rocket has to go very fast, about 25 times faster than a jet plane, to get to space.
