MATH

Mass and liquid volume

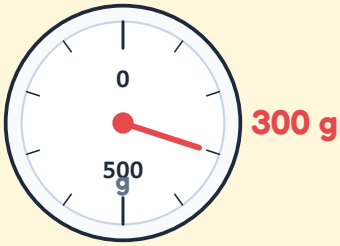

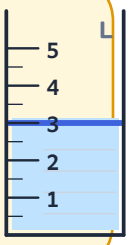

Name _____ Date _____

🎯 **I can measure mass in grams and kilograms and liquid volume in liters.**

1 How it works 💡

Light things are measured in grams (g) and heavy things in kilograms (kg). Small amounts of liquid are milliliters (mL) and big amounts are liters (L). On a scale or a jug, read the numbers, then count the small marks between them.

2 Grams or kilograms? Circle one. 🔍

g = grams, kg = kilograms

egg g kg	elephant g kg	dog g kg	feather g kg
apple g kg	pencil g kg	bike g kg	watermelon g kg

MATH · MASS AND LIQUID VOLUME

Read the scale

Name _____ Date _____

I can read a scale in grams and kilograms.

1 What does each scale show? Read the numbers, then count the small marks.

1

_____ g

2

_____ g

3

_____ kg

4

_____ kg

Liquid volume

Name _____ Date _____

I can read liquid volume in milliliters and liters.

1 How much water is in each jug? Look at the top of the water.

2 Milliliters or liters? Circle one. mL = milliliters, L = liters

bathtub

mL L

mug

mL L

spoon

mL L

pot of soup

mL L

MATH · MASS AND LIQUID VOLUME

Word problems

Name _____ Date _____

I can solve problems about mass and liquid volume.

1 Read, think, answer

1 A bag of apples has a mass of 950 grams. A bag of pears has a mass of 600 grams. How much more is the bag of apples?

Answer:

2 Sara's dog has a mass of 18 kilograms. Leo's dog is 7 kilograms lighter. What is the mass of Leo's dog?

Answer:

3 A jar holds 3 liters of water. How many liters do 4 jars hold?

Answer:

4 Noor pours 24 liters of lemonade equally into 6 jugs. How many liters are in each jug?

Answer:

FOR TEACHERS AND PARENTS

Answer key: mass and liquid volume

1 Page 1

Grams or kilograms: egg g, elephant kg, dog kg, feather g, apple g, pencil g, bike kg, watermelon kg.

2 Page 2

Scales: 1) 800 g, 2) 550 g, 3) 9 kg, 4) 7 kg.

3 Page 3

Jugs: 1) 850 mL, 2) 700 mL, 3) 7 L, 4) 4 L.
Milliliters or liters: bathtub L, mug mL, spoon mL, pot of soup L.

4 Page 4: word problems

1) 350 grams more (950 − 600 = 350)
2) 11 kilograms (18 − 7 = 11)
3) 12 liters (4 × 3 = 12)
4) 4 liters (24 ÷ 6 = 4)

5 Teaching tip 💡

Let children hold a 1-kilogram bag of rice or flour and a paper clip (about 1 gram), and fill a 1-liter bottle, so the units feel real.
